

Trevor Sakwa Timothy

Liverpool | Mobile: +447597749688 | Email: trevorsakwa@gmail.com | [linkedin.com/in/trevor-sakwa-302a13204](https://www.linkedin.com/in/trevor-sakwa-302a13204)

Personal Profile

Financial analyst with a strong foundation in SQL, Power BI, Excel, and Python for financial modelling, data visualisation, and diversified strategy development. Supported by a dual Master's in Finance and Investment Management with genuine commitment to client-focused financial planning and asset management to achieve long-term goals. Experienced in translating complex investment concepts into clear, actionable guidance and proficient in developing compelling reports for diverse stakeholders to assist in decision making. Passionate about developing evidence-based portfolios for the investors tailored to their utility, risk profile, and time horizon with transparent communication.

Skills

Portfolio Analysis and Wealth Management

- Portfolio theory and optimisation applying asset allocation, life-cycle hypothesis, diversification, and risk-return analysis.
- Scenario planning and long-term financial projection.
- Financial planning principles namely retirement planning and tax-efficient investing.
- Financial modelling: pricing analysis, margin optimisation, variance analysis, cash flow analysis, revenue forecasting, and business planning support.

Technical proficiency

- **Advanced Excel:** pivot tables, dynamic dashboards, and financial modelling
- **Advanced Power BI:** interactive dashboards, data visualisation and commercial performance reporting.
- **Advanced SQL:** querying, data extraction and structuring large data sets for analysis
- **Advanced python:** data pipelines, automation, stochastic modelling, statistical analysis and visualisation.

Stakeholder co-ordination and communication

- Cross-functional working: experience working across operational, financial, and commercial teams to deliver analytical outputs.
- Clear communication: translating complex quantitative findings into useful reports and presentations for non-technical members.

Education

MSc Finance and Investment Management | University of Liverpool - Sept 2025- Sept 2026 (present)

- **Key modules:** financial reporting and analysis – understanding financial statements and valuation metrics, Quantitative methods and economics – statistical hypothesis testing and regression analysis, financial regulation and ethics, corporate finance – M&A analysis and event analysis.
- **Research project:** Does Cross-market trading volume asymmetry between derivatives and spot markets increase vulnerability to price manipulation? Jane Street case study in India

CFA Level 1 and 2 alignments: MSc covers curriculum for chartership.

MSc Mechanical Engineering with Management (Eng) | University of Liverpool - Sept 2024- Sept 2025

- **Key modules:** Advanced Fluid Mechanics and Aerodynamics, Laser Materials Processing, structural integrity, project management and Computer Aided Design.
- **Research project:** 3D printing of high-performance BASF polymer materials: process optimisation for stronger parts.

BEng Mechanical Engineering | Swansea University - Sept 2021- June 2024

- **Key modules:** Finite Element Method, Fluid mechanics, Kinematics and Programming for Robotics, and Control Systems.

Experience

Maintenance engineer | Crown Beverages Limited | June 2023- Aug 2023

- **Commercial reporting:** designed and maintained performance dashboards tracking KPIs across multiple production lines, enabling data-driven operational decisions and contributing to a 20% increase in output.
- **Analytical problem-solving:** conducted systematic analysis of production inefficiencies, modelling root causes and implemented solutions that reduced downtime by 50% translating to direct commercial performance gains.
- **Regulatory reporting:** ensured accurate CMMS records and adherence to company standards for production lines during maintenance and inspection.
- **Cross-functional coordination:** collaborated with production, logistics, and management teams to align maintenance scheduling with commercial output targets and resource management.

Engineering Technician | Mount Elgon Hospital | June 2022- Sept 2022

- **Process automation and data accuracy:** built python automation system to eliminate manual processes for restocking thus reducing operational overhead by 30% while improving data accuracy.
- **Supplier and stakeholder coordination:** liaised with suppliers and internal departments to ensure timely, accurate information flows across operational and commercial functions.

Analytical projects

Event study analysis: Rolls Royce surprise earnings announcement.

- Investigated market reaction to a surprise corporate announcement using event study methodology
- Analysed abnormal returns (AR) and cumulative abnormal returns (CAR) following Rolls Royce's surprise earnings announcement in 2023. Compared actual market reaction against hypothesis using FTSE All Shares index to investigate possible information leakage prior to the announcement,

Monte Carlo simulation: dynamic leverage monte Carlo portfolio system.

- Portfolio management system built using python that combines stochastic simulation under the monte Carlo model, dynamic leverage cycling to take advantage of price momentum, and signalling engine.
- Standard portfolio management treats asset allocation as a static or slowly adjusting decision. The goal of this system is that it treats weights for given assets as dynamic variables that respond to momentum, fundamental performance, market sentiment and manager judgement. Rather than relying on single expected return estimates, the system employs Monte Carlo simulation to evaluate the probability distribution of potential outcomes under varying market conditions – directly applicable to business case support and pricing scenario analysis.

Wealth management: the optimal allocation of investments given investor risk tolerance and tax situation. Does the model hold under a recession scenario – working project

- Applying Black-Litterman allocation model, reasoning over plain mean-variance optimisation as it allows for project manager's market insights to blend with equilibrium returns as real market insight reduces unstable weights produced by Markowitz optimisation.
- Historical scenario testing: replicating shocks from the COVID 19 pandemic to provide a method to translate abstract risk to investor.

Professional development

-
- **CFA Level 1 and 2 curriculums:** covered through MSc Finance and investment management with the goal of completing the first examination next year to attain chartership
